Guarantor Verification

To request guarantor verification, you must provide us with the guarantor's details.

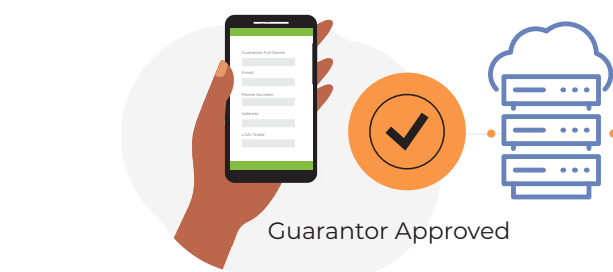

Once we receive a guarantor verification request via our portal or API, we email a digital attestation form to the prospective guarantor.

The prospective guarantor then confirms their willingness to be your guarantor by filling out the attestation form.

Once these details are captured, our system automatically runs an ID verification on the guarantor to ensure they are who they claim to be.

Guarantor Approved

Results are returned to the portal or over API.
